FOREWORD

"District of Columbia Cancer Incidence and Mortality Report - 1999" is a combined cancer incidence and cancer mortality publication of the Department of Health, Preventive Health Services Administration, Division of Cancer Control, and Cancer Registry (DCCR). It contains data on cancer cases diagnosed in 1999 by site as well as information collected on mortality data supplied by the DC Center for Health Statistics. The data presented can be used by public and private health officials, hospital administrators, managed care organizations, physicians, concerned citizens, and other not for profit organizations to assess and monitor trends related to specific cancers, plan prevention and intervention efforts, target high risk populations for increased screening and treatment services, and prioritize health funding. DCCR has been certified for achievement of "Gold Standard" for data of 1997, 1998, and 1999 by North American Association of Central Cancer Registries.

ACKNOWLEDGMENTS

The data as presented are a compilation of case and mortality reports completed by hospital tumor registrars and case abstractors, physicians, and reports forwarded on District residents from other collaborating state cancer registries. Their ongoing efforts and assistance in providing case data that are timely, complete, and of high quality are acknowledged with our thanks. The DCCR recognizes that their support in producing future reports necessary to meaningfully assess and interpret cancer trends in the District of Columbia is vital.

The DCCR is grateful to the National Program for Cancer Registries, for ongoing assistance and advice in support of the Registry.

This publication was funded by the Centers for Disease Control and Prevention Cooperative Agreement #U75/CCU310683-05.
